## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the fixing protrusion as recited in claim 18 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Objections***

1. Claims 18 and 23 are objected to because of the following informalities: Claim 18 discloses a "fixing protrusion protruded from an upper surface" in line 5. It is unclear which fixing protrusion applicant is referring to since applicant discloses in the specification a "fixing protrusion (not shown)"(pp.6 line 21) and a "first fixing protrusion" (261 b). Claim 23 recites " a fixing protrusion" as well in line 2 and is objected to for the same reasons as set forth above. Appropriate correction is required.
2. The indicated allowability of claim 22 is withdrawn in view of Yoo et al .  
Rejections based on the newly cited reference(s) follow.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 22 is rejected under 35 U.S.C. 102(e) as being anticipated by Yoo et al (6,905,224).

5. Yoo discloses an electrically conductive fixing member (301,302) having an electrically conductive base substrate (310), an electrically conductive unitary resilient fixing clip extending from a first surface of the base substrate (330), the fixing clip configured to fix a lamp to generate light (110,100) and a first fixing portion extending from an opposite second surface of the base substrate (340), the first fixing portion configured to fix the fixing member relative to a receiving receptacle(210,figs 9,10).

***Allowable Subject Matter***

6. Claims 1-21,26 are allowed.

7. Claims 23-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: The prior art cited of record does not anticipate individually nor teach in combination the structure of the instant invention in particular the feature of a first fixing protrusion inserted into the first fixing portion so as to fix the fixing member to the receiving space, the first fixing protrusion extending from the top surface of the substrate.
